Integriti Express

Integriti Express is an inexpensive software solution for Small and Medium Business's (SMB)s. The Express application is based on and derived from the powerful Integriti Professional Software which is the full featured commercial software application normally deployed for end users to manage a larger or more demanding Integriti System.

The look and general performance of the Express application is indicative of what can be expected from the Pro version however its functionality is restricted to a subset of features commensurate with what is required to perform basic management of a small to medium installation.

GateKeeper: A Simple To Use Dedicated End User Application

Just like its big brother Integriti Pro, the Express software incorporates a sub application known as Gatekeeper which is essentially a tailored yet controlled simple user interface to allow all end user tasks such as assigning user permissions and arming and disarming areas. This is a separated window into the system as distinct from the installer focused, System Designer application and shields end users from exposure to the complexity of installer programming functionality.

Amazing yet Flexible Access Permission Structure

As with the Pro version, Integriti Express delivers refreshingly simple, yet amazingly flexible, programming of user access to doors and areas. Doors can be added directly to users or structures such as Door Lists and User Access Groups can be employed. The use of optional exceptions means that large numbers of unmanageable user groups are a thing of the past.

An example of the use of exceptions is outlined below:
User 1:
David Smith has access to all factory doors except the rear exit.
User 2:
Trevor Wong has access to all factory doors plus the front storeroom door. In traditional access systems multiple access groups would need to be created to deliver these simple permissions. With Integriti only one access group, "all factory doors" is created and similar permissions are handled via exceptions.

Audit trail and Undo

Integriti software boasts an industry first, forensic audit and undo functionality. Stunning in its detail; this functionality means that accidental programming mistakes can be identified and undone, days or weeks after they have been made. The Audit trail shows the date, time and the user responsible for all system changes and allows these changes to be undone! This feature is common in desktop software but revolutionary in a hardware based access control system!

Integriti Express

Express software provides one connection to an Integriti Controller supporting up to 16 doors and can be used only on a single computer workstation. Express offers all the essential functionality required to configure, administer and monitor a single Integriti system. Full operator passwords are provided for added security and Integriti Express can be upgraded to Professional if and when further expansion is required.

The Integriti Software Family

System Features	Integriti Professional	Integriti Express	Integriti CS
User Management, System Programming, System Status, System History	✔	✔	✔
Hassle Free IP Connection With Skytunnel1	✔	✔	✔
Software Operator Permissions	✔	✔	✘
Gatekeeper – A Dedicated Application for Simple End User Operations	✔	✔	✘
Support for Multiple Clients / Multiple Workstations	✔	✘	✘
Schematics - Graphical Representations of System Status	✔	✘	✘
Alerts and Alarm Handling	✔	✘	✘
CCTV / DVR Integration	✔	✘	✘
Additional Functionality With Optional Software Modules - Photo ID, Advanced Reports, Communications Services, Dynamic User Import	✔	✘	✘
Upgradable To Integriti Professional	–	✔	✘
Permitted Software Users	End Users or Registered Integriti Installers	End Users or Registered Integriti Installers	Registered Integriti Installers Only

System Dimensions	Integriti Professional	Integriti Express	Integriti CS
Number of Controllers Supported	Unlimited[2]	1	Unlimited[2]
Number of Simultaneous Controller Connections	Unlimited[2]	1	1
Number of Doors Supported	Unlimited[2]	16	Up to 240 Doors per Controller
Controller Memory Level Expansions Supported	All	All	All if Connected on site via USB / Level 0 only if connected remotely

Note1 SkyTunnel provides non permanent connections between Integriti Controllers and all versions of Integriti software

Note2 Depending on the size and activity level of the system multiple servers may be required to support extremely large numbers of controllers.
